

1. Customer Journey

Service request to automatically classified and routed ticket

Project Title	Auto Ticket Classification using Flow Designer	Team ID	MKU201AutoTicket
Date	30.09.2026	Platform	ServiceNow Flow Designer / Workflow Studio

Journey Overview

Customer Touchpoints & Expected Experience

Stage	Customer action	System response	Expected outcome
Request	Selects/submits a catalog request	Request/Requested Item is created	Request is captured consistently
Classification	Provides request details	Flow evaluates category/keywords/attributes	Relevant ticket type is identified
Routing	Waits for processing	Assignment group is selected and task is created	Ticket reaches the responsible team
Fulfilment	Tracks progress	Catalog Task carries work details and status	Work is completed with traceability
Closure	Receives completion	Task/request status is updated	Clear end-to-end audit trail

Evidence from the current prototype

The supplied ServiceNow screens show a Service Catalog trigger, a Flow Designer action named “Create Catalog Task,” a generated Requested Item (RITM), and a Catalog Task (SCTASK) routed to the Hardware assignment group. These screens provide the baseline workflow that this project extends with automatic ticket classification.
