

Technology stack for the proposed automation

The supplied screenshots directly evidence ServiceNow, Service Catalog and Workflow Studio / Flow Designer concepts.

Layer	Technology / Component	Purpose in this project	Basis
Platform	ServiceNow	Core platform for procurement request and task records.	Shown in supplied screenshots.
Request interface	Service Catalog	Employee-facing standard laptop request.	Flow trigger is Service Catalog.
Automation	Workflow Studio / Flow Designer	Starts from Service Catalog and creates the catalog task.	Shown in supplied flow screenshot.
Request data	ServiceNow Request / Requested Item records	Stores request, item, quantity, price and status information.	Shown in supplied request screens.
Task management	ServiceNow Catalog Task	Creates and tracks the hardware configuration task.	Shown in supplied catalog-task screens.
Assignment	Hardware assignment group	Routes laptop configuration work to the responsible team.	Shown in requested-item screen.
Tracking	ServiceNow record lists and related links	Allows request, requested item and task tracking.	Shown in supplied screens.
Scripting (optional)	ServiceNow JavaScript	Custom validation/business logic if needed.	Not evidenced; proposed only if required.

Project flow represented by the stack

Service Catalog → Request / Requested Item → Approval → Workflow Studio automation → Create Catalog Task
→ Hardware team → Task status / completion
