

2. Proposed Solution

Automated Standard Laptop procurement workflow in ServiceNow

Project Title	Streamlining IT Procurement Automation – Standard Laptop	Team ID	MKU201 Laptop orders
Date	30.09.2026	Platform	ServiceNow / Flow Designer

Solution Overview

Build a reusable ServiceNow Flow Designer automation for the Standard Laptop catalog item. When a laptop request is submitted, the flow uses the Requested Item record as the context and automatically creates a Catalog Task for the Hardware team. The task carries the fulfillment description and remains linked to the original request for end-to-end tracking.

Proposed End-to-End Process

1	Employee submits Selects Standard Laptop in the Service Catalog.
2	Request created ServiceNow creates the Request (REQ) and Requested Item (RITM).
3	Flow triggers Service Catalog trigger starts the Standard laptop tasks flow.
4	Task generated Create Catalog Task action creates the fulfillment task.
5	Hardware fulfills Task is routed to Hardware and configuration begins.
6	Task completed Catalog Task is updated/closed after fulfillment; status is traceable from the RITM.

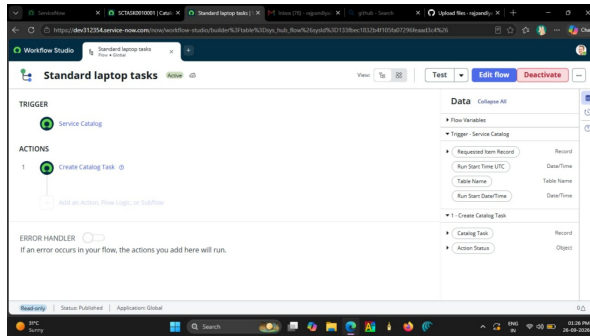

Key Functional Components

Service Catalog trigger	Starts the flow when the applicable catalog request is submitted.
Requested Item record	Provides the RITM context used by the flow.
Create Catalog Task	Creates the fulfillment task and exposes the created task as flow data.
Hardware assignment	Routes the laptop configuration work to the Hardware team.
Task details	Uses a standard short description such as “Laptop need to Configured” and preserves the request context.
Error handler	Provides a place to add notification, logging, retry or escalation actions when exceptions occur.

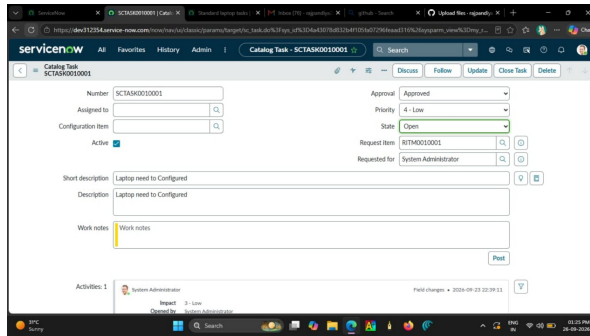

Expected Benefits

- Reduces repetitive manual creation of laptop fulfillment tasks.
- Creates a standard, repeatable process for the Hardware team.
- Improves request-to-task traceability across REQ, RITM and SCTASK records.
- Makes fulfillment ownership and status easier to monitor.
- Provides a foundation for future enhancements such as approvals, notifications, SLA checks and exception handling.

Current Prototype Evidence

Flow Designer: Service Catalog trigger → Create Catalog Task.

Catalog Task: Hardware-related fulfillment task with Open state.
