

No. of Functional Features Included in the Solution

Streamlining IT Procurement Automation – Standard Laptop

Functional feature count and coverage for the Standard Laptop automation

Team ID	MKU201 Laptop order
Date	30.09.2026
Platform	ServiceNow – Service Catalog and Workflow Studio
Automation	Standard laptop request → Requested Item → Catalog Task

1. Functional Feature Summary

For this project, a functional feature is a distinct capability that contributes to the automated standard-laptop procurement/fulfilment process. Based on the supplied implementation evidence, the solution can be documented as **8 functional features**.

2. Functional Features Included

No.	Functional feature	Description / evidence
1	Service Catalog request initiation	The workflow uses Service Catalog as its trigger for the standard laptop request.
2	Requested Item creation / context	The request contains a Standard Laptop Requested Item (RITM).
3	Automated workflow trigger	The Standard laptop tasks flow starts automatically from the Service Catalog event.
4	Catalog Task generation	Create Catalog Task creates the downstream fulfilment activity.
5	RITM-to-task traceability	The generated task is linked back to the Requested Item, as shown in the supplied records.
6	Hardware assignment	The Catalog Task is shown with Hardware as its assignment group.
7	Task status management	The task supports an Open state and can be progressed/closed by fulfilment staff.
8	Fulfilment information / work notes	The task contains short description, description, and work-notes areas for operational handling.

3. Feature-to-Business Value Mapping

Feature	Business value
Request initiation	Provides a standardized entry point for laptop procurement.
Automated task generation	Reduces the need to manually create fulfilment tasks.
Traceability	Makes it possible to follow the request from RITM to task.
Assignment	Routes work toward the responsible hardware fulfilment team.
Status management	Makes progress visible to users/administrators handling the task.
Work notes and descriptions	Provides a place to communicate and record fulfilment activity.

4. Functional Coverage

The demonstrated solution covers the core functional path from **request initiation** → **item creation** → **workflow execution** → **catalog task creation** → **hardware fulfilment** → **task completion**. Features such as supplier integration, automated purchasing/payment, asset registration, delivery tracking, or approval routing are not counted because they are not demonstrated in the supplied screenshots.

5. Acceptance Checklist

Check	Expected result
Request	Standard Laptop request can be submitted.
Flow	Standard laptop tasks flow is triggered.
Task	Catalog Task is created once for the request.
Link	Task references the correct Requested Item.
Assignment	Task reaches the intended Hardware fulfilment group.
Completion	Task can be updated and closed after fulfilment.

6. Final Feature Count

Total functional features documented: 8

This count is based only on capabilities visible or directly supported by the supplied ServiceNow screenshots and project description.

Evidence from the ServiceNow implementation

The supplied screenshots are used as implementation evidence. They show the Service Catalog trigger, the Standard laptop tasks flow, the Requested Item, the generated Catalog Task, and its fulfilment fields.
