

Project Planning

Auto Ticket Classification using Flow Designer

Project Title	Auto Ticket Classification using Flow Designer	Team ID	MKU201AutoTicket
Date	30.09.2026	Platform	ServiceNow Flow Designer / Workflow Studio

1. Project Objective

To design and implement an automated ticket-classification workflow in ServiceNow using Flow Designer. The solution captures a Service Catalog request, evaluates the request information against configurable classification logic, routes the work to the appropriate assignment group, and creates a linked Catalog Task for fulfilment.

2. Scope

In Scope	Out of Scope
Service Catalog request intake and RITM handling	Replacement of the ServiceNow platform
Automatic classification based on request attributes	Unrelated enterprise integrations
Assignment-group routing and Catalog Task creation	Manual classification as the primary process
Task status, work notes and activity traceability	Changes to unrelated ServiceNow modules
Flow testing, activation and basic error handling	Advanced ML model training unless added later

3. Project Plan

Phase	Planned activity	Output / milestone	Target
1. Requirement Analysis	Identify ticket types, request fields, classification criteria and assignment groups.	Approved requirement list	30.09.2026
2. Solution Design	Design customer journey, data flow, classification rules and workflow sequence.	Design documents / DFD	30.09.2026
3. ServiceNow Configuration	Configure Service Catalog trigger, Flow Designer actions and Catalog Task mapping.	Working automation flow	30.09.2026
4. Classification & Routing	Implement conditions/decision logic and map outcomes to assignment groups.	Classification + routing logic	30.09.2026
5. Testing	Create sample requests and verify RITM/SCTASK creation, routing, status and error handling.	Test results / evidence	30.09.2026
6. Documentation	Prepare project planning, requirements, technology stack and DFD documents.	Final project documentation	30.09.2026
7. Demonstration	Demonstrate end-to-end request-to-task automation.	Project demo	30.09.2026

4. Milestones & Deliverables

Milestone	Deliverable	Completion indicator
M1	Requirements baseline	Functional and non-functional requirements documented
M2	Workflow design	Trigger, classification, routing and task flow defined
M3	Automation prototype	Flow Designer flow configured and published/testable
M4	End-to-end test	REQ → RITM → SCTASK path verified

M5	Final documentation	Planning, DFD, requirements and technology documents completed
----	---------------------	--

5. Risk & Mitigation Plan

Risk	Impact	Mitigation
Incorrect classification criteria	Wrong team receives the task	Use clear, configurable conditions and test multiple request examples.
Missing/ambiguous request data	Flow cannot make a reliable routing decision	Define mandatory fields and a default/manual-review path.
Flow action failure	Task may not be created	Use error handling and execution-history checks.
Incorrect assignment group mapping	Fulfilment delay	Maintain a controlled mapping between classification outcome and group.
Insufficient test cases	Unexpected production behaviour	Test positive, negative and edge-case requests before activation.

6. Prototype Evidence from Supplied Screenshots

The supplied ServiceNow screenshots show the existing workflow pattern used as the project baseline: a Service Catalog trigger starts the flow; the flow contains a Create Catalog Task action; a Requested Item (RITM) is associated with the request; and a Catalog Task (SCTASK) is generated with an assignment group such as Hardware. The project planning above extends this baseline with automatic classification and routing logic.

7. Prototype Evidence

The first screenshot displays the 'Standard laptop tasks' workflow in ServiceNow Workflow Studio. The workflow is active and consists of a single action, 'Create Catalog Task'. The right-hand pane shows the data structure for the workflow, including variables for 'Run Start Time UTC', 'Table Name', and 'Run Start Date/Time'. The status is 'Published' and the application is 'Global'.

The second screenshot shows the 'Catalog Task - SCTASK0010001' details page. The task is assigned to 'System Administrator' and is in the 'Open' state. The description is 'Laptop need to Configured'. The 'Request Item' is 'RITM0010001' and the 'Requested for' is 'System Administrator'. The task was last updated on 2024-09-23 22:39:11.
