

Streamlining IT Procurement: Automating Standard Laptop Orders

3. Project Demo Planning

Date: 30.09.2026

Team ID: MKU201 Laptop Orders

This plan provides a structured sequence for presenting the Standard Laptop procurement automation. The demo is designed to be short, reproducible, and evidence-based.

Demo Objective

Demonstrate that an approved Standard Laptop request can automatically produce a Catalog Task with the required task information and Hardware assignment.

Demo Preparation

- Confirm the ServiceNow instance is accessible.
- Confirm the Standard laptop tasks flow is active.
- Keep the Request, Requested Item, and Catalog Task records ready for navigation.
- Keep the GitHub repository and demo video links available.
- Verify that the screenshots used as evidence are readable.

Recommended Demo Flow

- 1. Introduce the project title, team ID, and objective.
- 2. Open the Standard Laptop request.
- 3. Show the Requested Item record.
- 4. Show the active Flow Designer configuration.
- 5. Open the Catalog Task generated by the automation.
- 6. Point out Approval = Approved.
- 7. Point out Assignment Group = Hardware.
- 8. Point out Short Description and Description.
- 9. Summarize the benefit and future scope.

Suggested Time Allocation

- Introduction and problem statement – 1 minute.
- Service Catalog request and Requested Item – 2 minutes.
- Flow Designer configuration – 2 minutes.
- Catalog Task result and verification – 3 minutes.
- Conclusion and future scope – 2 minutes.

Demo Risk Handling

- If the live ServiceNow instance is slow, use the prepared screenshots as evidence.
- If a record cannot be opened during the live demo, use the recorded demo video.
- Avoid changing the active flow during the final presentation.
- Keep a backup copy of the repository and screenshots.

Demo Completion Criteria

The demonstration is considered successful when the audience can see the request, flow, generated Catalog Task, Approved status, Hardware assignment, and configured task description.
