

SAMPLE PROJECT DOCUMENTATION

Streamlining IT procurement automation – Standard Laptop

Project Title	Streamlining IT procurement automation – Standard Laptop
Team ID	MKU201 Laptop Orders
Date	30.09.2026
Platform	ServiceNow – Workflow Studio / Service Catalog
Primary Flow	Standard laptop tasks
Business Process	Standard laptop procurement and configuration

1. Introduction

This project documents the automation of a standard laptop procurement workflow in ServiceNow. The solution is designed to reduce manual hand-offs by automatically creating an operational Catalog Task when a standard laptop request is submitted.

2. Problem Statement

A standard laptop request can require multiple manual steps: receiving the request, identifying the Requested Item, creating a hardware/configuration task, and linking that task to the original request. Manual creation increases processing effort and can reduce traceability. The project addresses this by using ServiceNow Flow Designer/Workflow Studio automation.

3. Project Objectives

- Automate the standard laptop procurement task creation process.
- Create a consistent Catalog Task for the Hardware team.
- Maintain a traceable relationship between Request, Requested Item and Catalog Task.
- Provide a repeatable workflow that can be tested and demonstrated.

4. Scope

In Scope	Out of Scope
Standard laptop Service Catalog request	Non-standard/custom laptop procurement
ServiceNow workflow automation	External supplier purchasing integration
Requested Item and Catalog Task generation	Physical delivery tracking
Hardware task assignment and lifecycle	Financial settlement/payment processing

5. Solution Design

The solution uses a Service Catalog trigger connected to the **Standard laptop tasks** flow. The flow receives the Requested Item record and executes the **Create Catalog Task** action. The resulting task is linked to the Requested Item and is visible in the related Catalog Tasks list.

Input	Automation	Output
Standard laptop catalog request	Service Catalog trigger	Flow execution
Requested Item record	Create Catalog Task	Catalog Task
Laptop configuration requirement	Hardware assignment	Actionable hardware work item

6. Implementation Evidence

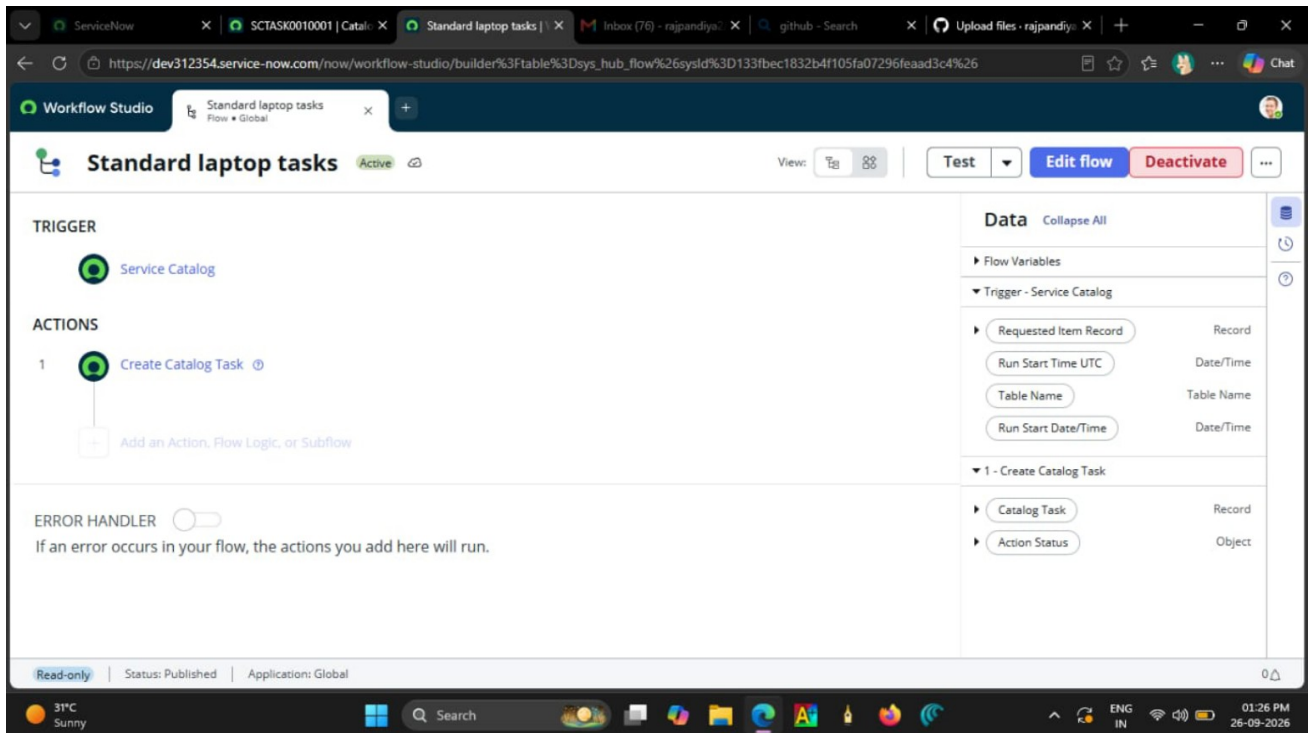

Figure 1. Workflow implementation in ServiceNow Workflow Studio.

The screenshot shows the active Standard laptop tasks flow. The visible design contains a Service Catalog trigger and one Create Catalog Task action. The Data panel exposes the Requested Item Record and other trigger values used by the flow.

7. Request-to-Task Traceability

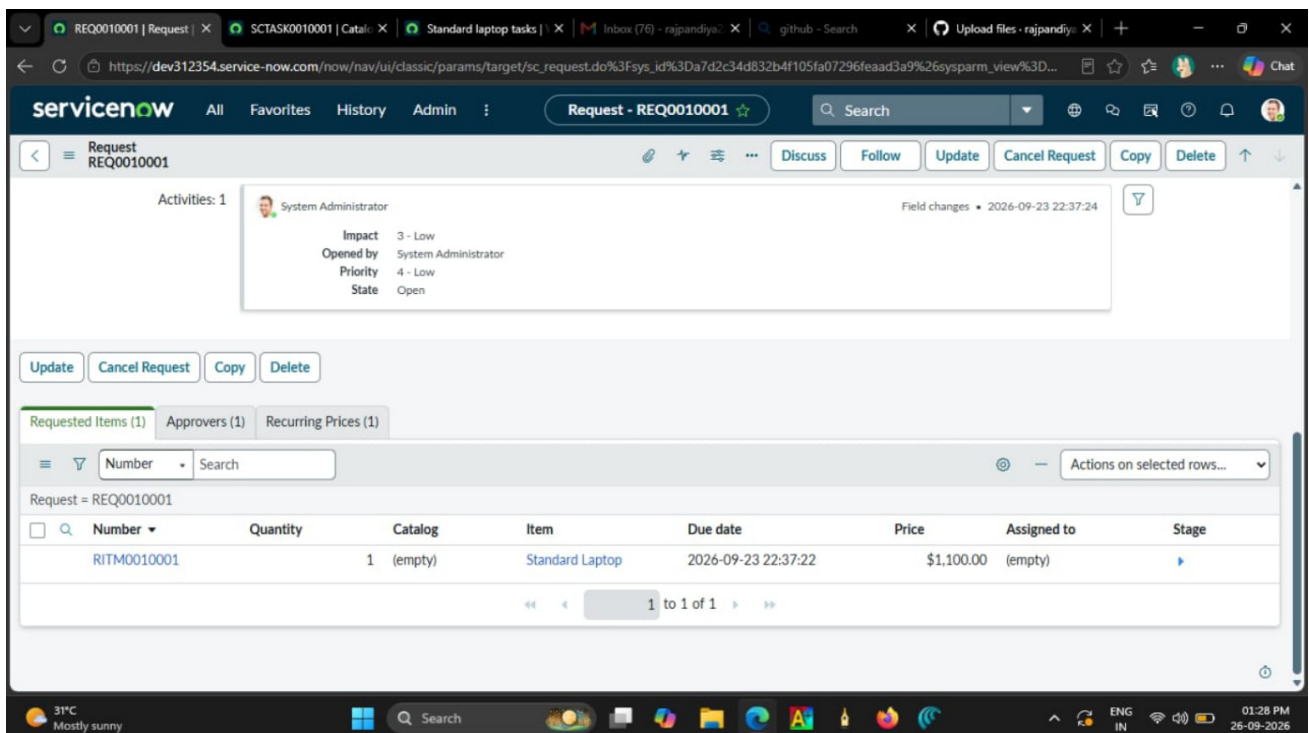

Figure 2. Request REQ0010001 with Requested Item RITM0010001.

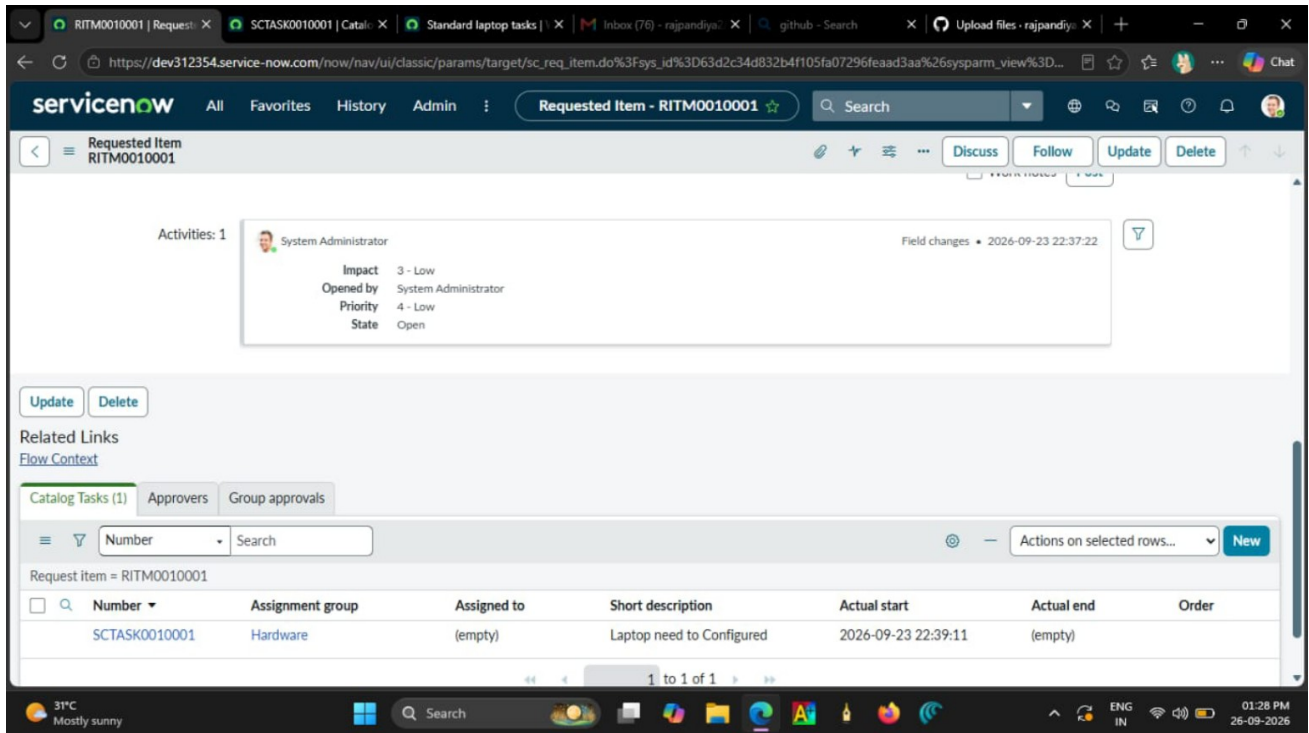

Figure 3. Requested Item with generated Catalog Task SCTASK0010001.

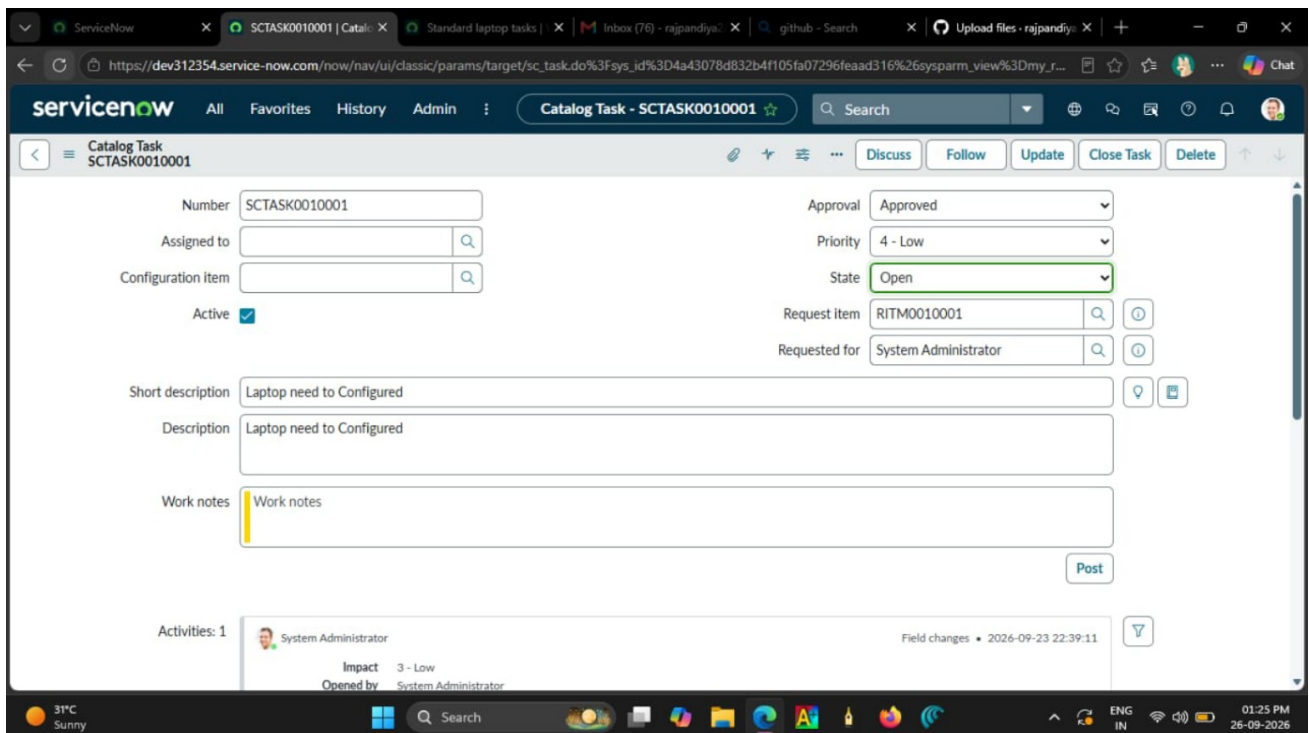

Figure 4. Generated Catalog Task showing the laptop configuration work item.

8. Sample Test Cases

Test ID	Test condition	Expected result	Observed evidence
TC-01	Submit Standard Laptop request	Request and RITM are created	REQ0010001 / RITM0010001
TC-02	Flow processes the RITM	Catalog Task is created	SCTASK0010001
TC-03	Review related records	RITM lists the Catalog Task	Related list screenshot
TC-04	Open generated task	Task contains laptop configuration description	Catalog Task screenshot
TC-05	Review assignment	Task is associated with Hardware group	Requested Item screenshot

9. Benefits

The demonstrated workflow provides a repeatable way to create laptop configuration tasks, improves traceability between related ServiceNow records, and reduces the need for manual task creation. It also provides a clear starting point for future enhancements such as approval rules, assignment logic, notifications, inventory checks, and delivery tracking.

10. Conclusion

The MKU201 Laptop Orders project demonstrates how ServiceNow workflow automation can streamline a standard laptop procurement process. The supplied evidence shows the flow configuration and the resulting Request, Requested Item, and Catalog Task records, providing a complete demonstration path from user request to operational laptop configuration work.

11. Project Information

Project Title	Streamlining IT procurement automation – Standard Laptop
Team ID	MKU201 Laptop Orders
Date	30.09.2026
Platform	ServiceNow – Workflow Studio / Service Catalog
Primary Flow	Standard laptop tasks
Business Process	Standard laptop procurement and configuration

Prepared as a sample project document from the ServiceNow screenshots supplied for the project. Date: 30.09.2026.
